AutoCAD LT AutoCAD LT is a special-purpose client application and version of AutoCAD for use on mobile devices, operating systems and some embedded systems. AutoCAD LT is available for iOS, Android, Windows Phone 8, BlackBerry OS and Windows 8. Mobile clients in the AutoCAD LT suite support two-way communications between AutoCAD and AutoCAD LT. In mobile client applications, when a user selects a drawing, a floating viewport shows a drawing layer on the screen. The user may modify the layer, create annotations, add custom layers and perform 2D drafting. Mobile client applications have a separate drawing layer in which a user draws, no matter what user interface (UI) is used. When an annotative layer is active, annotations are added to the screen layer. In desktop applications, the UI remains active, and the same window/view remains active as long as the user has not exited the application. X-Plane AutoCAD applications for the X-Plane computer operating system are available for Microsoft Windows, macOS and iOS. X-Plane applications provide a combination of professional 3D models and CAD data models. The X-Plane application has the ability to create and edit drawings directly, without having to open an AutoCAD drawing or model. X-Plane applications feature GPU acceleration, which enables significant performance improvements on older systems. X-Plane applications also provide the option to create layers based on the type of annotation being used. Perception is running well in Xbox One X but we have some known issues to report. First and foremost, we do not recommend Perception on consoles that are not Xbox One X. It can cause very noticeable screen tearing and stuttering and lead to some pretty hideous lag spikes. We are actively investigating an issue that causes a lock-up in Perception when performing the F-Stop Matrix. An unoptimized program is all it takes to cause the issue. Please update to the latest version of the F-Stop Matrix if you are experiencing this issue. The visual effects are all extremely
