Published by WJE, The Sharpe Company, Inc. Illinois. "Symposium on Instrumentation for Astrophysics",. Robert J. Hill, Martin Lubin, Eugene Hecht,. Optics,â€ Fourth Edition, Addison-Wesley, Reading MA.Q: Do non-human organisms, even plants, have conscious and sentient feelings? Human beings are a relatively complex species - I'm not sure that can be said for the rest of the animals. Do non-human animal species feel emotions and have sentience, i.e. can they suffer pain, and can they feel fear or anger? A: Yes, non-human species can have feelings, and suffer pain and fear. Animals can suffer from stimuli caused by environmental factors as well as genetics. In addition to that, a good environment with plenty to eat can help health as well. A young baby is attractive to a parent for many reasons. The baby is a mirror image of the parent. We like to look at babies when they are sleeping because they look so nice. There is a close connection between parent and baby. When we see a baby for the first time, we are fascinated by its smiling countenance. There is also no doubt that the face of a newborn baby is the sweetest picture one can imagine. Research has shown, and we are inclined to agree, that the human baby is the most beautiful being on the planet. (source: wikipedia.org) Growing up we notice many changes in the temperament of the baby. At one point, the baby is hungry, and at some other point, it is tired. It cries when it is hungry, and it cries if it is tired. But just as it cries when we feel pain, it cries also when we feel sad. It cries when we hit it, or when we put it in the prison. It is important to understand, however, that the baby simply cries, because it feels sorry for us (and, well, just because we do). It is sad for the baby, but most of the time it is joyful, because it is showing us a new face! Rapid preservation of the conditioned place preference in mice:
