In most cases the media refers to this type of "music" as HipÂ . a single level in our case, only results from a single study can be extracted from this data. Most of the current molecular assays are performed based on PCR or real-time PCR technology. In the past decade, high-throughput sequencing technology has been applied to cancer research, and has shown great potential to further advance the diagnosis and therapy of cancer. To date, this technology has been widely used in the analysis of copy number variations (CNVs), transcriptome sequencing, mutation screening, genome-scale DNA methylation analysis, and so on. As a novel technology, HPV testing has been widely used for prevention and diagnosis of HPV-related cancers, such as cervical cancer, anal cancer, and oropharyngeal cancer. Using the next generation sequencing method, nucleic acid-based high-throughput sequencing technology has been widely used to detect HPV in HPV-related cancers. For example, the OncoPrint™ HPV Research assay (Thermo Fisher Scientific) is a c6a93da74d
