When it comes to the planets, Mercury is the smallest planet. But it's also the planet with the most infamous reputation. Mercury is the planet that was ascribed an association with Babylon . It was also the first planet that was discovered, which helped lead to the establishment of the Copernican system . The Earth is much bigger than Mercury. Its diameter is roughly 1,000,000 miles or 1,600,000 kilometers. Mercury's diameter is roughly 60,000 miles, about half as big as the distance from the Earth to the sun .

Lightroom 5 now lets you create collections of images to start saving memories in. The Process workflow panel is now fully customizable. You can now decide which assets you want to reprocess with your new look. This is likely the most significant update to Lightroom in a while, and unless you are a pro, you likely won't use it very often. As a result, I feel that the update is detailed and more of a missed opportunity than a missed opportunity. Graduated filters are new in Lightroom 5. Before you use this filter, you will have to create a library that contains your work. Afterwards, all of your work in that library will be processed in that same filter. You will not be able to drag and drop photographs into the filter, and even if you do, it won't affect those master collections. Again, a missed opportunity. You can now add your choice of custom presets to the Lumen and Reflect controls, which are available within the Develop module, in CorelDRAW. It used to be that only Adobe's top-secret customers got access to Lumen, while Reflect was available only to Adobe's creative workflow software CS6, although CS6 was never released to the public. Lightroom 5 now offers options that include a more than half-dozen presets, which add a purple cast to your images that looks purplish and perfect for photographing female celebrities. More than 700 have been created so far, and, when combined with the new diversity of presets, it will be much easier to create a familiar look for your photographs. The new feature colors and linework are quite a lot more pleasant than the options in previous versions. You can also add a texture area to define the appearance of your own face. This is something that no other RAW editor can do. Go to the camera's menu, select the top-level camera setting, and pick "Brush." You can choose to process a portion of your photo, such as a face, using a sharp brush. You can also use a texture brush. Pick the brush, enter the width of the brush in pixels, set the brush stroke thickness, roundness, and strength. You can also adjust that many brush settings to come up with something closer to what you want. Alternatively, you can add an artistic effect with the style brushes.

We all know if we can't afford to rent exhibition space or need something like creative copy, our only option is to give it away. That means that, like many photographers, we have to embrace the concept of guerrilla marketing. On the surface editing experience, the new Smart Sharpen tool, though designed to remove the noise in an image, is quite useful. This feature actually works well enough, that it can replace the standard denoise tool, improving image quality. Similarly, the new Synthetic Blur tool is very similar to the standard blur, although the new version allows users to blur the entire image and any layer of the image at once. Users can also tailor the amount of blur, and even apply the effect globally. Users can adjust the amount of image blur from -15 to +15 in either direction. The Lasso tool is now available both on the drawing tools layers and the selection tools layers. Another element that makes this new release more robust than the previous version is the removal of the mouse requirement for selection, and the conversion to the trackpad. With this single-action, users can lasso or marquee the image, and the smart tools make minor tweaks to improve accuracy and quality. With the update, the UI can now be resized after the app is launched; this allows the UI to better fit any available space, and makes it easier to place the app in any region of the screen. Users can still have their workspace be on the left or right side of the screen. Top models and fashion and beauty gurus alike know that it is hard to master matte makeup. They also know that skin must be captured while it is at its best-with its dewy look, flawless and lit with light. For makeup, a matte portrait is ideal. It instantly turns an everyday look to something far more glamorous and life-like. Users can now easily create an ideal texture matte with their new Fill and Replace tool

**Adobe Photoshop Actions** If you want your actions to perform complex tasks that are outside of the Photoshop program, you can incorporate more sophisticated commands into your programs. For example, you can stock an entire action in a folder, and then name it so that a number of actions will execute when they are invoked. For example, a stock image suitable for Instagram might include a number of different types of compositing enhancements, and it would be easier to change the type of enhancements you add if you write a separate action for that purpose. One button is great, but in order to get everything done quickly, Photoshop Elements lets you create and apply multiple actions at once. By associating multiple actions with a single keyboard shortcut, you can do multiple editing tasks in a single step. You can apply multiple actions to a single element, every time you make a change (or press a keyboard shortcut), or even apply the same action to multiple different elements in the project. It’s easy to add actions to Photoshop Elements’ projects. Since all of your project elements have the same characteristics, each uses the same action settings. If you’ve ever wanted to bundle Adobe Camera Raw into all your image editing programs, you’ll love the way that Elements can now do this. If you edit images with the camera raw profile set by the Adobe Camera Raw application, when you edit and open an image in Photoshop Elements with that same camera raw profile, your image will automatically have the same camera raw edits. In other words, Element’s new style settings can be applied without having to undo the edits in the raw (.cr2 files).

Whether you want to learn photography, Photoshop, front end development, digital art, etc. we have it all covered. Adobe's undo command is one area where the web version of Photoshop has often been outpaced by its desktop version. With this implementation in the desktop version of the software, it's now been a full year since the web version was updated with this functionality. It is great to see this feature is finally on the desktop version. Adobe is stepping up their game on their web version. They seem to care tremendously about what we like and don't care about what we dislike. On the other hand, some big features from the desktop version, like Content-Aware replace and better layers, are still waiting to come to the web version. The web version is lagging behind the desktop version. Hopefully, this will be updated in 2018 with the new updates and releases. Although currently, the lack of undo is its biggest complaint on the web version. The new version of Design has a big update with design tools, including Move tool, rotation tool, added fonts, swatches panel and much more. This new version will also contain the web layout, which will function as a graphic design tool, and the web video. Design also offers Material Design. Microsoft also makes a great case for its Assistant for Business subscription package, which lets you manage your business-related documents and emails inside the Office 365 apps and Office apps for Android and iOS. Its bare bones feature set is comparable to Google’s offerings, but it does claim to offer the best version of Google search across all your devices, with information from both your web browser and email.
