A 12-year-old boy has died after being attacked by a grizzly bear while he was swimming in a Yellowstone National Park stream, the National Park Service confirmed. The incident happened at the Canyon Creek day-use area on May 24 when the boy was swimming with three other people in the creek. He was attacked by a grizzly bear and then airlifted to a nearby hospital where he died, the NPS said. His condition before he was attacked was not immediately known. Grizzly bear attacks usually happen in June or July as the bears begin to enter their breeding season, according to the NPS. The man who shot the bear was at the time fishing when he saw a bear in the creek and shot it with a .30 caliber handgun, the NPS said. "Although this attack occurred at a popular day-use area, and in an area known to have many visitors, this incident is the first fatal grizzly bear attack of the season," said Superintendent Dan Wenk in a statement. "Visitor safety is our highest

What's New in the?

Introducing the latest version of Z-FTPcopy, Z-FTPcopy II. Featuring speed and functionality, as well as a revamped user interface with a fresh look. Key Features:

- Faster than ever Download and upload files from the server as fast as you can type. It takes less than 5 seconds to upload and download a file to or from the server and transfer data much faster than the average Windows client.
- Sync with cloud storage Upload files to your server and sync them automatically to other cloud storage services such as Dropbox, Google Drive, Box, OneDrive and many more.
- Built-in scheduler Schedule file transfer over time, while keeping track of the activity of all your upload and download sessions.
- Intuitive interface Z-FTPcopy II automatically creates a shortcut on the desktop for each FTP server you connect to, making the setup and transfer process much simpler.
- Advanced FTP settings The application allows you to easily modify most of the FTP server settings such as proxy settings, timeouts, keep alive etc, all without having to enter the FTP server details.
- Faster FTP server connection No more slow uploads and downloads because your connection drops frequently or you have to wait for the next time the computer checks its online status. The application comes with a new user interface and a fresh look, and you don't have to dig into a config file to find your settings anymore.

.NET Deployment Tips & Tricks - a great new series by iControl Solutions. In part 1, the developer talks about the pitfalls of the automatic click-once deployment & the benefits of a manual deployment, in a Windows application. More posts & videos about: tips, tricks, iControl Solutions On iControl's YouTube channel, you will find a great collection of Windows software tips and tricks. This post is part of the great series:.NET Deployment Tips & Tricks - a great new series by iControl Solutions. In this first part, the developer talks about the pitfalls of the automatic click-once deployment & the benefits of a manual deployment, in a Windows application. In this video from Percona Live, Percona's MySQL Group's technical director Michael Robertson gives a sneak peek into a prototype workbench for MySQL InnoDB internals. In InnoDB, data is stored in a series of tables organized into "pages", which are the B-tree for the table. Each page is one or more extents. The extents are filled with data in fixed-sized chunks. Each block can contain many records, and the number of records in a page is called the "
