When working in Photoshop the popularity of the user interface means that there are a lot of features you're probably accustomed to. Contouring tools Adobe Photoshop Features Let's look at some of the classic tools we use every day. First off, is selection. Ever since the beginning of Photoshop, it's been one of the most powerful tools in your bag. At the time of writing, the standard selection tool is just giving it's all in the advanced mode. With newer image editing apps, selecting multiple areas on an image is now something we're used to, but the advanced mode is still a really powerful option there. As for the advanced mode, it is especially useful when working with vectors and shapes. Now, lets have a

look at eraser tool to remove backgrounds. In the past, you had to have a lot of images on hand if you wanted to use this tool. Now, however, the gradient tool allows you to remove any background from your image at once, neatly and quickly with just a few clicks. Selection tools for styling vectors and shapes are always important, and in addition to the standard selection tools, you can now also work with frames and masks. Now, you're not limited to only including shapes that are similar to a mask. The new shape tools mean that you can style or create your own shapes with absolute ease. And of course, due to its popularity, you can now work with 3D layers and selections; particularly useful for when creating mockups. And of course, of course, The most advanced tool that's always been in Photoshop is definitely the content-aware fill. This has improved, and is now more accurate and safe and many other things, but is now easier to understand with the new additions. Now, the method for choosing where to pick what to fill the content in is genius. Generally, I would suggest using this tool to get rid of stray objects - but you can basically use it in a way that doesn't produce a simple background mask. So, I actually use it often in the image editing when I want to create a fully black-and-white image.
