Blurb is part of Photoshop and is a set of features that enables you to create a button for your button. This way, you can easily draw and design buttons for your application. If you create a button in Blurb, it will not appear in Photoshop Elements and vice versa. Photoshop Adjustment Controllers enable you to customize the appearance of your images with just a few clicks and fine-tune the response of an adjustment. You can control every aspect of an adjustment, including Exposure, Lightness, Contrast, Black and White, Clarity, Saturation, and other image-specific adjustments. With an open-ended approach, Photoshop allows you to create your own buttons. Although this is not a core feature, I like to use Photoshop's layer-based approach to create buttons. Adobe Photoshop is one of the software package that is heavy, strong and best to use it under Photoshop Elements is an awesome app with less number of features. But, it is possible to modify, edit and add images, create new page layouts, add and customize shapes, link, associate file formats, customize and transform existing content like Photoshop CS. Photoshop's 3D tools are being replaced by new features that will arrive via their next release, Adobe Photoshop Creative Cloud 2020 (Adobe Creative Cloud v2020) which will be available next year. Also, in the new update, a layer styles panel will be added to the Layers panel. With this new

panel, users can increase their Photoshop capabilities with a tool that replicates layer styles-like gradient fills, shadows, and strokes created in other photo editing software. Users can also increase their ability to add filters, masks, and other effects to their images, Aside from these features, there is also a fading toolbar (Opens in a new window). The fading toolbar will allow users to view and interact with Photoshop layers, blend modes, and actions. The fading toolbar will launch or display floating windows that dynamically update with the updates of a layer or image. This capability will be extremely useful for highly advanced Photoshop users who may want to use tools like erasing, comping, and masking when editing a few layers. However, the slow performance of the tool when viewing a large number of layers can be frustrating. Adobe's new update also lets users customize the tools used to work with their layers and save custom tool sets. With this new update, if you customize a tool set, you will be able to return to that tool set when using any Photoshop app. As with most downsides to a version, the user interface may be a bit bug-ridden. That said, the developers have already stated that future development revisions are being made to fix identified issues.
